**DIY: OEM Roller Blind - Rear Hatch 1K0 064 360**
_____

This is my contribution to this great forum:

I searched all over this forum, and others, and the net in general and cannot find anything in-
depth regarding this item. So i decided to try my luck and go ahead and do it by myself. I ordered
mine from VW Parts Department.

I got the package over thanksgiving weekend. I noticed that the box is kinda crumpled and all.
And when I opened the package, I instantly noticed that the roller blind is broken, and the other
things that should be included were missing. And since its saturday that time, i just email them
regarding this issue. I also called them up on monday, and was able to speak with Tim in parts.
They were sorry for the incident, and said they will ship a new roller blind and told me to expect it
on friday.

So friday came and I got the package. And it's not broken and none of the other stuff is missing.
So i decided to snap a few pics and share the install with you guys:
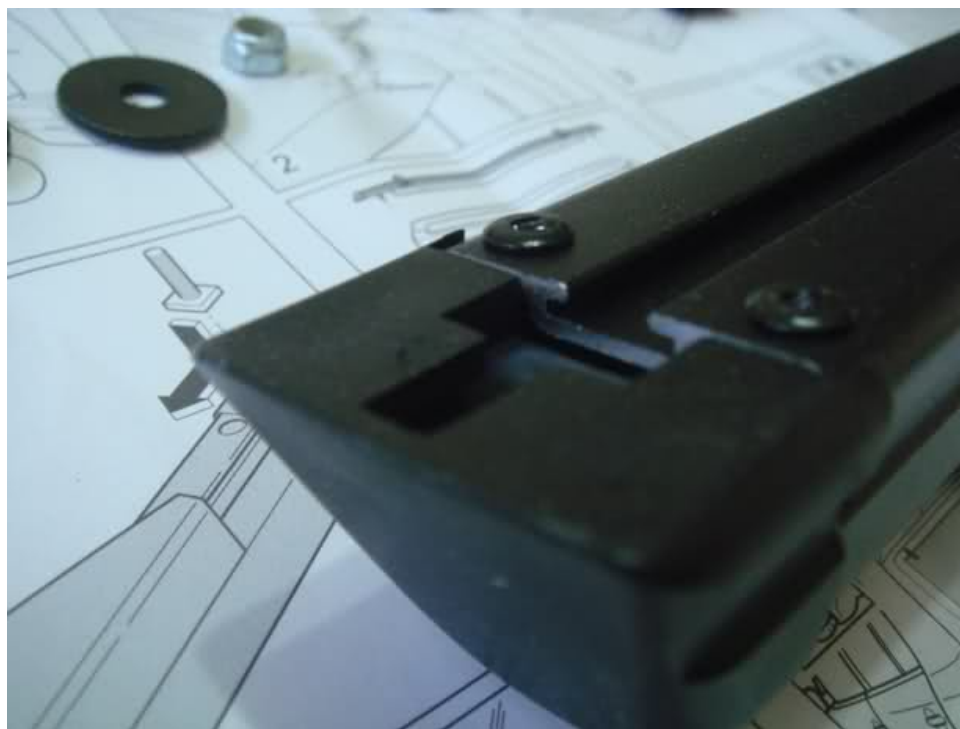

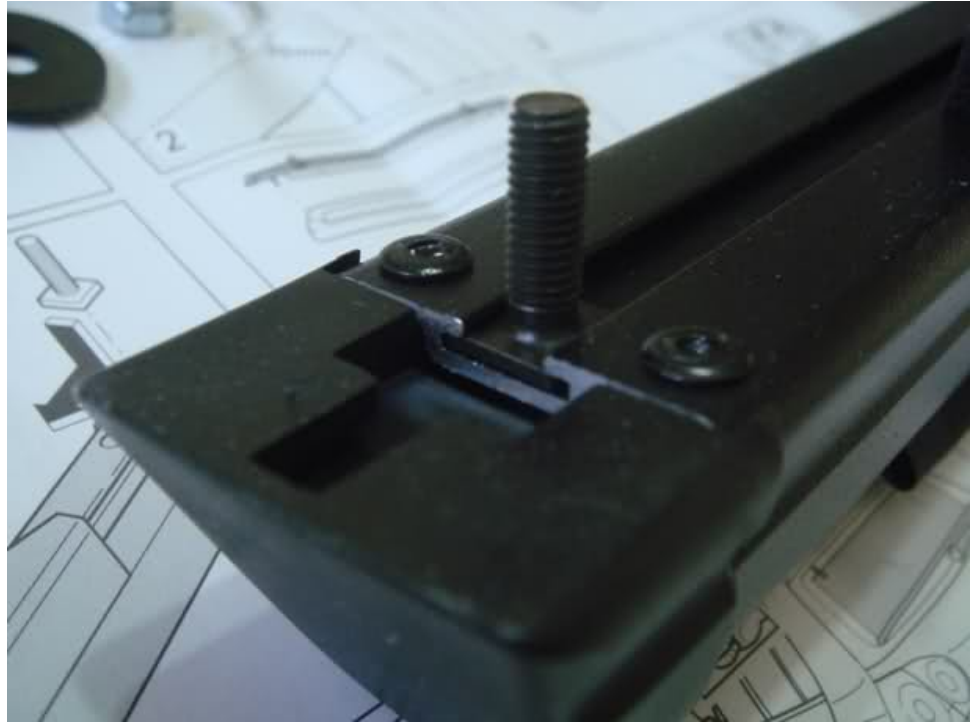

1. Pics of the box/label

2. Contents
aside from the roller blind itself, these items should also be included in the box + the instruction sheet
(missing from 1st package sent to me)

3. This was the part that was broken in the 1st package
no picture of actual broken part, but you guys can imagine what it looked like
the plastic part at the end is completely broken-off from the metal tube of the roller blind

4. Install: bolt
the 2 bolts should be inserted in the inner rails at the bottom of the roller blind, one at each end

5. Install: hook
the hook should be attached in the inner edge of the rubber gasket/seal

using a screwdriver wedged in between will make this easier

it should be placed lateral to the groove, on each side

6. Install: Making a hole
20mm /35mm is the point wherein the hole has to be made
the reference point is the hole from the string attachment

view of the underside, with the bolt thru the hole

view of the underside, with the nut/washer attached to the bolt

7. View of the roller blind - left side

View of the roller blind - right side

8. Complete: roller blind down

9. Complete: roller blind up

10. Upclose view of the hook + roller blind loop

11. String attached to the rear hatch + roller blind up

12. Views from the inside

13. Upclose view from the inside
there's a strip of grey foam at the bottom of the metal part of the roller blind

I'll take some pictures of the outside rear of the car, with the roller blind up to see if it's noticeable from outside.

all in all, it took me about 10mins.

next project is this:
Sun Shade (Rear Side) 4 Door 1K5 064 362
