Update: [CLICK HERE](#) If you just want the tutorial and don't care about the journey...

If you already did the retrofit but want your mirrors to auto fold when holding the lock button: [CLICK HERE](#) (KESSY NOT NEEDED)

This is a project I've been working on for a while. I originally bought a set of brand new supposed power, folding mirrors a while back, and upon receiving them realized that they were not. A few days ago, I stumbled upon a pair of power folding mirrors from Malaysia on eBay. They arrived yesterday and I was able to get them installed. However, Jose was able to get everything working except for the power fold.

I figured I would make a separate thread, that way when I get this figured out others could benefit

The set of mirrors that I bought this time around are definitely necessary in the harness, unlike that original set that I b

here are the wiring diagrams for the driver side and passenger side

here is the wiring diagram for the adjustment switch

here is a picture of the front and back of the passenger mirror plug. Now this set of mirrors came from a Japanese Golf which was right hand drive. Pins 14 and 15, which are violet and blue are inverted on the right

was folding the wrong way and they were able to solve the problem by swapping pins 14 and 15. This picture is after I swapped the pins.

unfortunately, my driver side mirror had the plug and cut off, so I had to grab a new plug and from a few Junkyard vehicles so that I could splice it on. I ended up matching my driver side pin arrangement to the passenger side arrangement. Which did properly coincide with the wiring diagram. Blinkers, puddle, lights, horizontal, and vertical mirror adjustment, and heating elements all worked perfectly. The only thing not working was the power fold.

I assumed this was because of a lack of coding.

With the VCDS you need to navigate to the driver's door module which I believe is number 42 then you need to navigate to coding, which is 07. And then click the coding helper and work your way through until you see the option for power folding mirrors installed. You need to check that box. And then you need to go through the exact same procedure on the passenger door module.

I was able to enable this and still do not have the function.

I did some output tests, and it did seem as if the switch was functioning . However, I noticed a few times that my mirror adjustment was not responding to input, so I think I may have a bad switch from AliExpress. So I ordered a used Tiguan oem power folding switch from eBay. Once that arrives, I will swap out that switch and see if that fixes the problem.

Advertisement

While I am waiting for the switch to arrive, I may pull the door cards and power pro pin 14 can get the mirrors to fold confirming that the folding motors actually function.

back on the topic of VCDS, some of the videos and tutorials found say that you need to access on the door module, to gain access to the adaptator button, in order to enable some reason, the access code which everybody says is what the code says.

So, at the moment, it appears that for some reason, I am lock button on the fob for three seconds does not work, does not work. It could be the switch, I could have things modules may not actually have power folding capability.

Sort by **Oldest first** ▾

Modules 5KO 959 792A & 5KO 959 793A are called out and a lot of the posts as modules that have power

**tinygiant** Discussion starter

7,264 posts · Joined 2012

...

The part number 5K0 959 701A refers to a Volkswagen window motor. 

### Compatibility with Power Folding Mirrors:

Based on the information available, the window motor with part number 5K0 959 701A is not compatible with power folding mirrors. 

### Details:

- The part is described as a "Window Motor" and explicitly states "Exc. Power Folding Mirrors" in the description.
- This means that the 5K0 959 701A window motor is designed for vehicles without power folding mirror functionality.
- If your VW has power folding mirrors, this part is not the correct replacement for your window motor. 

In summary: Part number 5K0 959 701A is a window motor for Volkswagen vehicles, but it's not designed for vehicles equipped with power folding mirrors. 

I found a thread today where someone replaced their modules with the 5k0959792a and 793a modules but when the VCDS scan was performed it still showed their original 701a/702a modules in the scan. That being

happening the other ones.

Other info I just discovered:

Address 42: Door Elect, Driver

Labels:.. 1K0-959-701-MIN3.clb

Part No SW: 5K0 959 701 H HW: 5K0 959 701 H

Component: Tuer-SG 009 2105

Coding: 0005238

Shop #: WSC 01357 011 00200

VCID: 377D9EDB464D8D2EB2-8062

No fault code found.

Labels:.. 1K0-959-701-MIN3.clb Supposedly the MIN means that the controller may not have folding capabilities. There should be one that calls out MAX which should.

This thread is for MK5s, but the retrofit uses the same modules

You're very welcome.

I plan on going to the junkyard tomorrow morning to try to find window modules to see if I can find any with the correct amount of pins. I had a list of supposed good part numbers for modules that will facilitate folding, but I've also read just count the number of pins in that connector block. If there are pins in the 14 and 15 position, then it will support folding mirrors. From what I gather potentially any from 2006 to 2016 may work. I guess we will find out soon enough.

Once I have this completely figured out, I'll make a singular post with all the information laid out organized.

passat sel and eos have a good chance of having what i need

I have both of the passenger and Driver modules. One is pulled from a Scirocco out of Florida. From my research the serial numbers need to finish with an A. The factory ones I have on my 2dr base model is the same number without the A which does not support foldable mirrors.

Switch/knob for driver side door panel: 5K0 959 565 XSH

These parts are relatively easy to source but the hard part is getting factory L/R oem mirrors at a decent price. I have opt to go with a pair on eBay, company called Spieg search for part number below

Driver Mirror assembly: 5K0857508AF9B9

Passenger Mirror assembly: 5K0857507AF9B9

I just thought I would compact this information because the other posts are super old. This is not just a plug and play application unfortunately. I did have these modules in the car previous and was able to get them working randomly. the driver/passenger side window were programmed incorrectly so inner up and down function worked on the passenger side instead of driver. The folding mirrors were as you stated earlier folding opposite. I also ran into the same security issues you had but with obd11. I recently have purchased a VCDS which I successfully installed multifunction steering wheel and xenon conversion. I will be following this thread carefully.

Very cool.

I was able to get my pair of power folding mirrors from ebay from a Malaysian seller. He said the car was from japan.

i paid \$250 shipped for the pair of mirrors.

i just pulled my door car and found my modules only have 7pins. So there is where my problem lies. I need modules.

I will check the junk yard tomorrow for something with more pins. A passat sel may have the module, potentially a EOS may also.

if not I resort to finding them on ebay

thanks for joining the conversation!

Mission accomplished:

Power Folding Mirrors installed on a MK6 Base Model Golf!! #mk6 #mk6golf #...

Here we go

You will need the Following

#### **Mirrors:**

LH Power Folding Mirror

5K0 857 507 AF

RH Power Folding Mirror

5K0 857 508 AF

#### **Power Folding Switch**

(See Notes on Aliexpress Switch)

OR

OEM 2009-2017 Volkswagen Tiguan SUV 4DR Left Door Power Mirror Switch 5K0959565

[\*\*NOTES ON SWITCH CLICK HERE\*\*](#)

### Modules

1K0595792A (RH Passenger)

1K0595793A (LH Drivers)

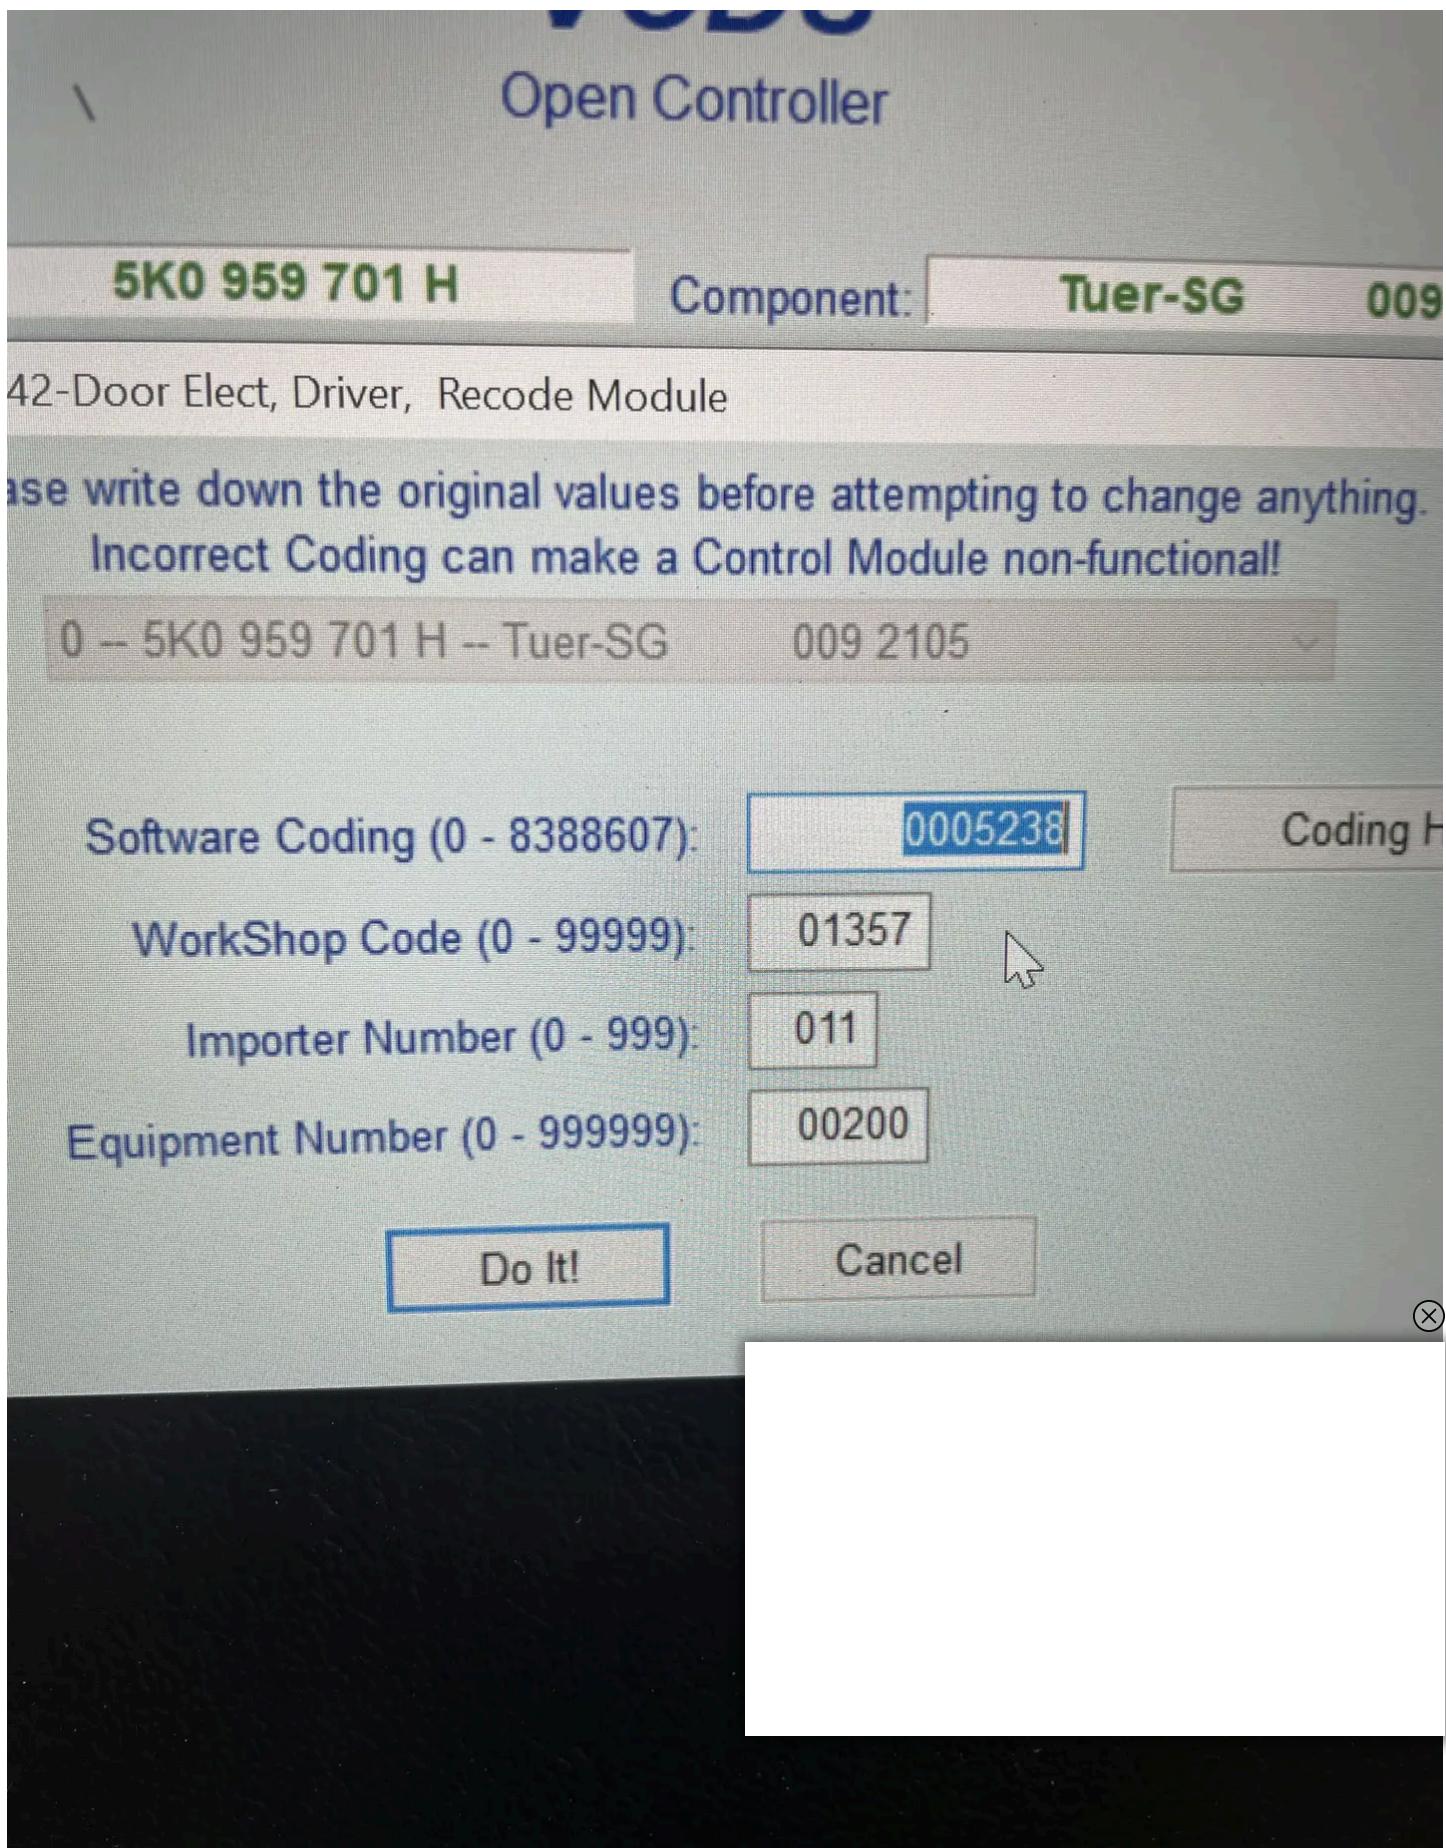

[Click for Module Compatibility info](#)

### Harness Parts

Maybe cut some harnesses at a junk yard so that you can de-pin and splice if you need to. [Wiring Diagrams](#)

**VCDS Programming connect your vcds and pull the current door module coding for your original modules. Good for starting over if you wanted to**

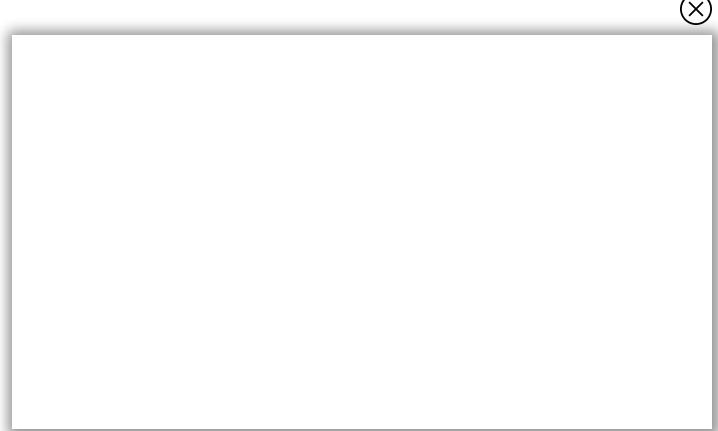

**Steps:**

1. Remove door panels. There is a T25 screw center bottom of the door card and if you pop off the door handle cover it will expose two more screws in the handle. Remove all three screws and the door panel will pop off. Work from the bottom. You will probably break some clips. If you do the part number is B09SDGW7D3. Cheapest to grab some at the junkyard.
2. you will want to unplug the door switches so that you can swing the door card out of the way. You can leave the pull handle cable attached. If you have door warning lights you will want to pop those out and unplug them so you don't stress the wires.
3. Remove the tweeter speaker. Pull from the top and then slide up. There is a piece at the top that inserts into a grommet and two small white clips that slide into channels on the tweeter. I just leave the speaker dangling, but you can unplug it.
4. Unplug all connector from the window module on the regulator. There are little red bars that need to be pried out in order to squeeze the clips to slide the plugs out.

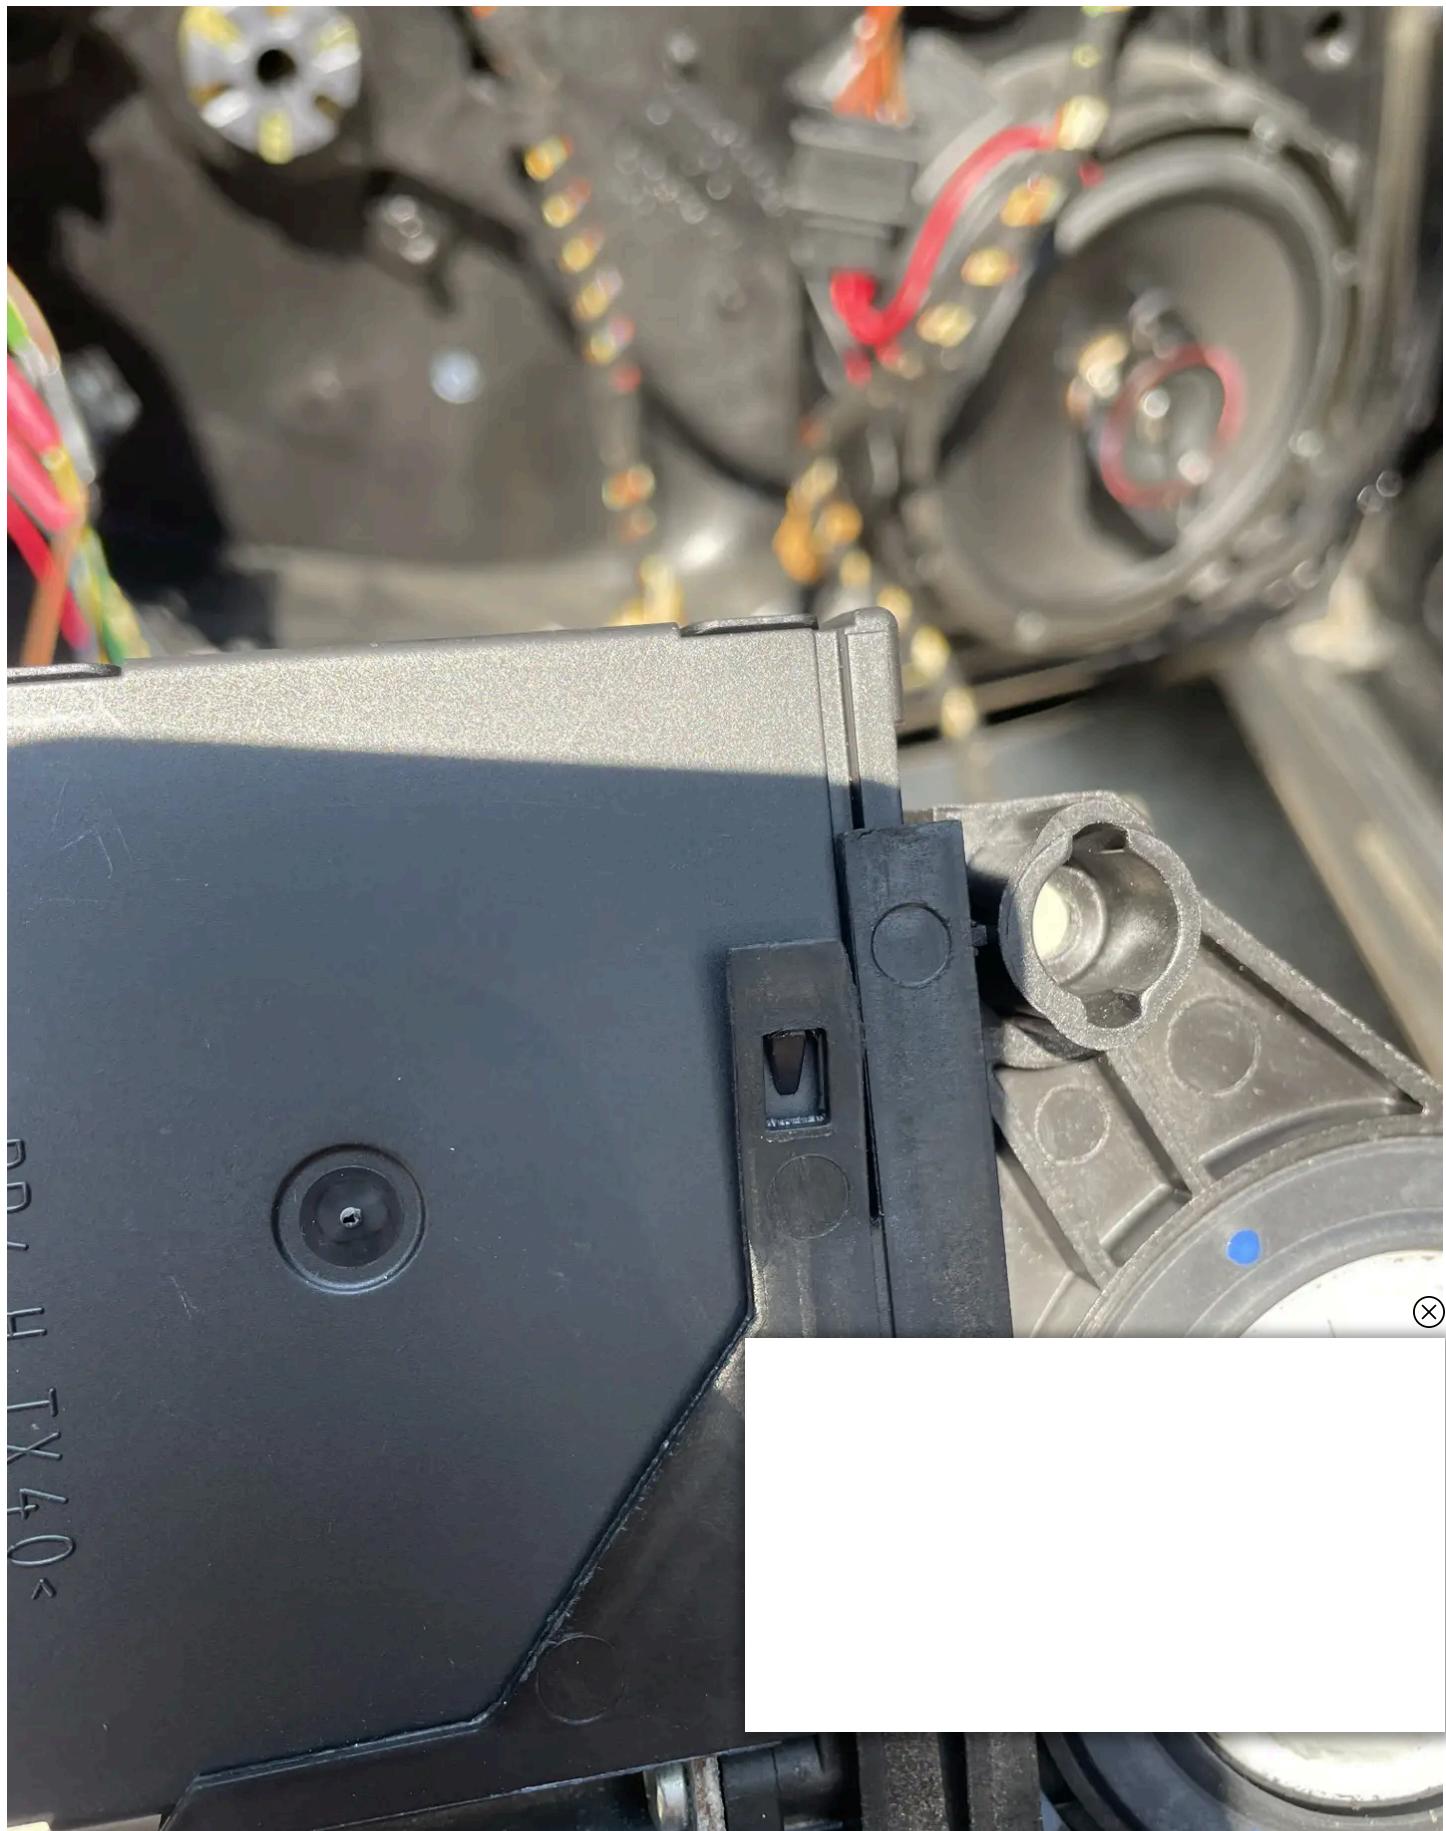

5. once unplugged you can remove the three screws that hold the regulator in place. They are triangulated around the circle. This uses a T25 bit.
6. There are clips on each side of the black box you need to gently pry them while then sliding the black box out of the channel it sits in

Removed

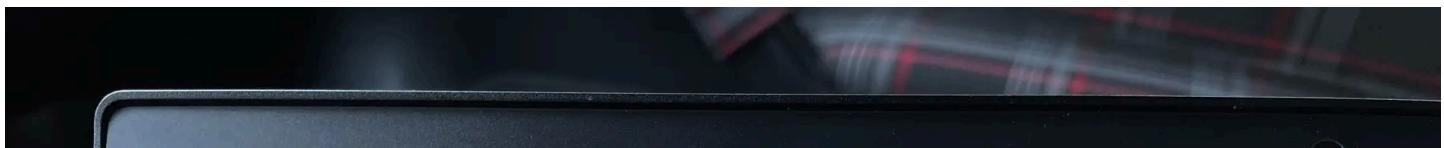

7. slide the new box in and return the assembly back to the door and put the three screws back in.
8. Follow the harness with the 16 holes to the side mirror. There is a clip that cinches onto the door you need to pop off. Then you need to pop out the green piece that is connected to the door that is zip tied around the harness. I just use pliers and pull it out.
9. Use an 8mm triple square bit to remove the one bolt that holds the mirror to the car. Once removed you can wiggle the mirror out of place and then feed the harness out and through the rectangular hole in the door. After the old mirror is removed. Put the new harness through that same hole and put the new mirror in place. Attach new mirror with the triple square bolt.
10. Run the new harness down to the controller and plug it in.  
If you need to repin the harness or build a new connector because your harness was cut [CLICK HERE FOR DIAGRAM](#).
- NOTE** If your mirrors came from a RHD car you will need to swap pins 14 and 15 on the Drivers Side plug. If you do not, the mirrors will work opposite of each other. When the drivers goes in, the passenger will go out. You do not need to change the pins on the passenger side.
11. On the drivers door remove the old mirror switch. There are four prongs around the exterior of the switch that attach it to the holder. They are a pain to release. My trick is to use a very small precision screwdriver and get it between the front and side while pushing the old switch inward. Work your way around and it will pop out. Put new switch in place. **NOTE** On the Aliexpress folding mirror switch it seems the heated mirror and folding mirror positions are swapped. I am waiting to put extra details to see if the Tiguan switch I ordered will solve the issue. Stay tuned
12. Do exactly what you did on the drivers side to the passenger side to replace modules and new mirrors.
13. Make sure everything is plugged in, put the cards back on and screw them in. Put the handle covers back on and let's move to programming.

#### Programming:

Some Notes. I pulled my modules from a CC and I think in. I will replace the EOS one eventually. The EOS one gives This isn't a problem, just a code that can be ignored, I'm can gateway and go to the installation list you can uncheck was not checked and checking and unchecking did not have frameless doors for the windows. This means the car can open the doors and then after they are closed they will remain open. In the module coding there is an option for frameless windows still happens. This really doesn't matter. When the car is parked for a few seconds after the doors close they go up to seal. It doesn't seem like they come down enough to let anything in either. I also have the vent shades so nothing could ever get in even if they dropped an inch.

I spent hours trying to find solid data on what module part extra firmware prefixes and wasted so much time. Its was almost all the pins for the 16p plug. DUH! If the module has

Bad module: Only 7 pins (blinkers, heated, electric adjust)

Good module:

Has almost all pins. They all have one pin missing that is

if you are looking for modules on ebay look for the following  
1K0959792a and 1K0959793A these are VW CC/Passat versions.

Or

These are ideal as the 5K0 notates they are Golf modules. However you probably wont find these in the states as I don't think any of the Golfs came with power fold.  
5K0959793A and 5K0959792A

But in the end as long as it has all the pins you should be good.

Sort of related, sort of not. Any idea if the new modules will also support the auto dipping mirror function? It looks like it should according to the module number.

Based on obd11 app Mirror Dip V1 only passenger side is used for mirror dip. In order for the car to communicate with the mirror it needs the modules we have. You also need mirrors with memory function.

OBD11 Compatibility check

1. Control unit list

2. Passenger door (52)

3. "info"

4. "Protocol" section at the bottom, it should say "TP2.0: KWP2000"

The mirrors I got off eBay have memory function only on the passenger side. I will be testing this feature and I will post the results.

I enabled this feature today in central electrics. You are correct passenger side door needs to have memory seat/mirror enabled in Passenger (52)

navigate to central electrics bit 4 and enable bit 3 Mirror Lowering with reverse gear

After coding a feature will appear in the MFD under Convenience, check "Mirror Down". After follow this procedure

Now that I think about it you are correct the memory is kinda useless. The only issue I am having is the power when the mirrors are folded but works fine when unfolded. Sorry to about the computer/vag, I would correct it if I could.

I would open up the mirror and check continuity on the wire. And maybe put it under a little stress to see if your continuity cuts out. Maybe there's a crack in the wire.

I originally added puddle lights to my basic conversion lights. All you need to do is connect the negative to the negative feed on the light/blinker plug. And then run a wire on the positive side to position 10 on the 16pin plug. (Pretty sure it was 10)

My OEM Tiguan switch arrived today. Now the mirror fold on the fold position and not the heated position. Which confirms my suspicion that the aliexpress switches are probably made for the RHD models which is why we need to swap pins 14 and 15 on our harnesses.

I am not getting confirmation on the vcds that the heater position is turning on the heated mirrors. The position switch says "on" but the heated mirror signal says inactive.

I'll dig into that later i guess.

So the windows jogging up and down i figured could be a mk5 option that was hard coded on the eos. Even though the vcds had the option to toggle between frameless and not frameless windows. Toggling did nothing.

so today I grabbed some 3c0 modules from a 2010 CC figuring it may be a newer version. It certainly is as the coding is different. But they still auto jog and now the toggle option is gone. Someday I will probably just pony up the dough for the euro 5K0959792a/93a modules.

Q mk6 auto folding mirrors adaptations

DRIVER . 6

3. **Security Access:** Click on "Security Access - 16" and enter the required security code. This code may vary, but it's often 04354 or 31347. 
4. **Adaptation:** Once the security access is granted, click on "Adaptation - 10". 
5. **Locate System Parameter:** Find the specific channel for mirror folding. It might be listed as "(9)-System\_Parameter\_0-System Parameter Byte8" or "(2)-System\_Parameter\_14-System\_Parameter\_15-System Parameter Byte1". 
6. **Modify the Value:** Change the parameter to enable a function. This might include:
  - Changing E0 to E5 (open with)

- Changing E0 to E9 (open with door) [🔗](#)
- Alternatively, you might need to set a value to enable "Funk Spiegelanklappung Modus" (mirror folding via remote control). [🔗](#)

7. **Save and Test:** After making the changes, save the adaptation and test the functionality by locking and unlocking the car. [🔗](#)

Depending on the modules generation you can either do it with **VCDS** or need to modify the EEPROM (not possible with **VCDS**) to enable mirror folding.

You can determine the version by checking the label file name for module 42 in the Autoscan:  
 MAX3 - will require EEPROM change  
 GEN4 - possible through adaption

For GEN4 it goes like this:

**ECU** 42 > Login: 04354 > Adaption > Channel "(9)-System\_Parameter\_0-System Parameter Byte8" > set value to "95" or "99"

90 = default value

95 = mirror folding via keyfob and automatic opening on ignition on

99 = mirror folding via keyfob and automatic opening on driver door open

I am wondering if you can purchase or find gen 4 modules for our mk6. I have been through all the forums referring to unlocking with a key fob and all lead to changing code with EEPROM.

Mirror now auto fold with holding the lock button on the

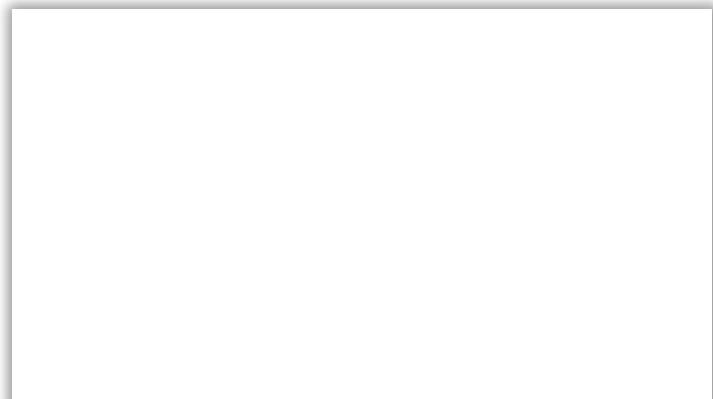

Take a picture of your code before making changes. That

### Instructions:

Module 42>security>enter 04354>do it>adaptations>system parameter\_0>  
change value 90 in the 9th binary to 99 if you want them to unfold when door handle is pulled  
Change to 95 if you want them to unfold when the car is turned on.

## Then Do it!
